ANSWER KEY

Chapter 1	2. Correct answers may include the following: Disinfectants act in a wide-spectrum environment inside the body. The body will readily eliminate viruses like hepatitis. Bacteria, on the other hand, are not so easily eliminated. The immune system will respond to the virus and the bacteria differently. The immune system will respond to the virus by increasing the temperature of the body to help increase the virus's temperature. Once the immune system temperature is higher than the virus's, the virus will be destroyed. The immune system will respond to the bacteria by increasing the temperature of the body and increasing the number of white blood cells to destroy the bacteria.

SHORT ANSWER	
1. Answer to the question of the anatomical and control structures and the physical relationship between body organs or systems. Answer can be modified broadly at the gross anatomy level, or locally can be detailed anatomical or systems, systems, and local level or the physical structure of the organ, and its relationship to other organs within the same system or different systems. 2. Provide the study of how living organisms perform their functions. Human physiology is the study of the function of the human body. Physiology can be broken down into more specific areas of physiology, functions including cell physiology or even cardiovascular physiology.
